SYNOPSIS:
This intensive course focuses on critical anatomic and biologic concepts for oral bone grafting in order to form a basis for the principles of implant site development procedures. A systematic patient evaluation will be introduced to identify the prognostic keys for predictable treatment.

Diagnostically driven treatment planning methods for esthetic outcome will be emphasized as important tools to assess the individual risks and to predictably achieve optimal esthetic outcomes for a wide range of case scenarios.

Three procedure videos will be shown to reinforce the clinical case presentations.

The risk factors associated with oral bone grafting complications and failures will be covered in detail.

LEARNING OBJECTIVES:
Indication, step-by-step protocol, materials, suturing techniques and temporization for each of the following four procedures will be covered in detail:

- Guided Bone Regeneration (GBR)
- Maxillary ridge expansion by split-cortical technique
- Mandibular ridge expansion by Pedicled Sandwich Plasty technique (PSP)
- Vertical ridge augmentation using the interpositional osteotomy technique

Louie Al-Faraje, DDS
Dr. Louie Al-Faraje is a private practitioner as well as the founder and director of the California Implant Institute, which conducts a one-year fellowship program in Implant Dentistry. Since 2001, more than 1,000 dentists from 20 countries received training at the institute. Dr. Al-Faraje is a fellow of the AAID and a diplomate of the ICOI and the American Board of Oral Implantology. Dr. Al-Faraje is the author of a best-selling textbook “Surgical Complications in Oral Implantology” published by Quintessence 2011, “Oral Implantology Surgical Procedures Checklist” Quintessence 2012 and “Surgical and Radiologic Anatomy for Oral Implantology” Quintessence 2013. He is on the editorial board of the Journal of Oral Implantology (JOI).
